ROW UNIT

NG Plus 3

The NG Plus 3 row unit is shown below with standard features. Other options are available for specific conditions or uses.

- (1) Hand wheel
- (2) Hand wheel
- (3) Adjustable V Press Wheels
- (4) Independent Gauge Wheels
- (5) Heavy-Duty Disc Openers
- (8) Heavy Duty Parallel Linkage
- (9) Stabilizing Springs
- (10) Metering Box
- (11) Heavy-Duty Plastic Hopper

SEED DEPTH

The seed depth is adjusted by the hand wheel (1) that changes the height of the depth gauge wheels (4) in relation to the disc openers (5). A sticker close to the hand wheel, indicating a gradual scale, ensures the uniformity of the depth control on all row units of the planter. Be sure that all row units of the planter are set at the same adjustment.

The disc openers and ground adjustment system guarantees an accurate and regular seed depth in all types of soil and conditions because the depth wheels are positioned perpendicular to the falling point of seeds.

V PRESS WHEELS

The two adjustable rear press wheels (3) affect only the closing of the seed furrow. They float independently and therefore do not have any effect on the ground engaging of the unit. Their soil pressure is regulated by the hand wheel (2). This adjustment allows for shallow (beet), medium (corn) or deep (bean) planting. This pressure has to be chosen carefully with relationship to the type and humidity of the soil, in order to assure proper seed to soil contact.

The width between the bottoms of the adjustable press wheels can also be adjusted with the addition of spacer bushings placed next to the bracket. A spacer of 10mm (25/64") is standard, and can be replaced with a bushing of 8mm (5/16") for narrower closing (such as sugarbeet seed).

Using an oilcan, lubricate the closing wheel assembly at pivot points daily, or as needed. Optional disc closing systems with flat or V press wheels are available. See section under optional wheels. © 2008 Monosem Inc. This is a dowloadable version of the manual. A partial download may not contain all pertinent information. Make sure to read Chapter 1, Safety. Due to ongoing upgrades specifications may change without notice, contact a Monosem Rep for current information.
ROW UNIT

NG Plus 3

DEPTH GAUGE WHEELS

The depth gauge wheels (4) are engineered with an equalizing rocker bar to assure uniform depth control of the disc openers, even in clods or rocky conditions. The gauge wheels are independent of each other for a smoother ride through the field. The Optional gauge wheel scrapers can be added, if necessary, to lessen soil buildup to maintain a uniform depth control.

In order for the disc openers to remain properly cleaned and free of soil build-up, the flange of the gauge wheels need to be just touching the disc. To double-check this, raise the unit (using the unit lock up) and manually rotate the gauge wheels; the disc openers should also rotate freely without restriction.

After starting up the planter, the factory assembly may need readjustment. Adjust gauge wheel spacing by putting the washers from one side of the articulating arm to the other. Using an SAE multipurpose grease in a clean grease gun, lubricate the gauge wheel arms as needed.

DOUBLE DISC OPENERS

The heavy-duty double disc openers (5) are very durable and mounted on watertight roller bearings. Their function is to slice the soil, and open a straight seed trench. A new interchangeable firming point attached to the frame and positioned ahead of the seed tube also acts as a disc scraper. As mentioned above, the flange of the gauge wheel should be just touching the disc openers, without restricting their movement.

A disc scraper is mounted to the side of each disc. You can adjust the pressure of the scrapers by tightening or loosening the bolts.

STABILIZER SPRINGS

The pair of stabilizer springs (9) located within the parallel linkage (shown above) absorbs shock and helps to stabilize the unit in rough terrain. Optional heavy duty down pressure springs are also available.

SEED HOPPER

A 52, 60 or 90 ltr. plastic hopper with lid (11) is standard, depending on the type of planter and seed usage

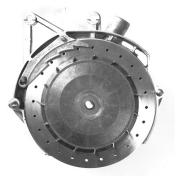

DRIVE CHAIN

The drive chain has a hardened surface that increases wear resistance and extends the life of the chain. The drive chains are spring loaded and therefore, self adjusting. The only adjustment needed is to shorten the chain if wear stretches the chain and reduces spring tension. The pivot point of the chain idlers should be checked periodically to ensure they rotate freely. The drive chain is 5R, and has 124 links with the connector link. Use a chain lubricant spray daily, or as needed.

SEED METERING SYSTEM

The seed metering system (10) consists of a 2-part metering box made of cast aluminum that is equipped with stainless steel seed discs that deliver the seed to a curved seed tube.

The metering box is located below the seed hopper and is engineered for accuracy and long life. The special shape allows for planting even when a minimum of seed remains in the hopper. The metering box contains sealed bearings for durability.

The stationary part of the metering box is called the main housing. shown below. and is mounted in the planter unit frame.

Components in

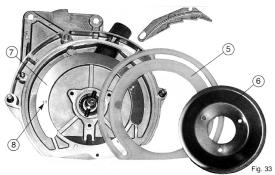

the main housing are the plastic wear gasket (5) and cap (6), seed disc and seed scraper. The plastic wear gasket, on which the seed disc rotates, should be smooth and in good condition. Under normal operating conditions, it should be replaced only after 1250 to 2500 acres. The metal brace (7) should be positioned with its tab notched in the hole of the housing. The outer edge of the plastic wear gasket is then rotated into the groove, locking into place when the stub fits into the hole of the housing, and is then held in position by the cap (6) and 3 bolts.

NOTE: Thoroughly clean the metering box housing before installing a new wear gasket. Any residue left from previous use will not allow the gasket to fit in the proper position.

ROW UNIT

NG Plus 3

On the outside of the main housing is the lever for adjusting the air suction to the weight of the seed, as well as setting the height of the seed scraper.

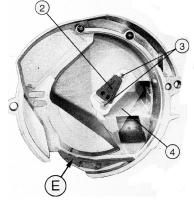

The second part of the metering box is called the **cover**. The cover is secured to the main housing by 2 wing nuts. The components on the outside of the cover are a control window and trap door. The components on the inside of the cover are a metal shutter, and ejector block.

The control window is made of clear plastic and allows for viewing of the seed against the seed disc. It can also be raised for close inspection.

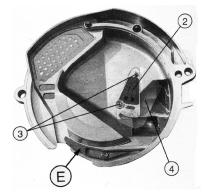

The metal shutter regulates the flow of seeds coming from the hopper and provides a constant and sufficient level in front of the disc. According to the seed used, the shutter has to be checked and adjusted at 2 different positions before planting.

The interior shutter is adjusted by lowering it after loosening the 2 bolts (3). A small plastic sheet (4) is located under the shutter and is also used to limit the level of seeds in front of the disc.

1 – **High Position**: For large seeds, such as corn, soybean, edible beans, cotton, etc. The high position moves the shutter away from the opening.

2– Low Position: For small seeds, such as cucumbers, beet, peppers, etc. The low position moves the shutter over part of the opening.

NOTE: A special metal shutter is available for planting small seeds such as cabbage, rapeseed, etc., to reduce the seed flow into the seed chamber.

The brass ejector block (E) assures that the seed is dropped at a consistent angle to reduce seed bounce inside the seed tube, for more accurate seed placement. Because of the important function of the ejector block, it is recommended to check its condition periodically.

04/05

ROW UNIT

NG Plus 3

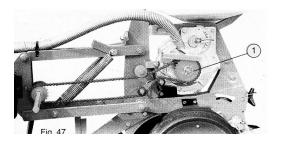

EXTRA LARGE SEED

A special metering box cover should be used for seeds such as peanuts, and kidney beans. This special metering box cover is designed with a larger opening (to improve the seed flow into the seed chamber), a larger discharge channel (to avoid blockage), and a special less aggressive seed scraper (to avoid skips). The position of the metal shutter should be in a high position for these large seeds.

NOTE: If your planter was ordered to plant extra large seed as the main crop and it has the special metering box cover installed, you will also be able to use this cover for smaller seed as corn or beans, by adjusting the metal shutter to a low position.

DISENGAGING THE METERING BOX

The individual disengaging of a metering unit is possible by removing the lynch pin (1) or by disconnecting the vacuum hose.

SEED TUBE

The seed tube is the last point of contact the seed has in the metering system. After the seed passes by the brass ejector block, (which ejects the seed at a consistent angle to reduce seed bounce in the seed tube) it is guided through the curved seed tube into the seed trench.

Before and during each new planting season, check to see if the seed tubes are in good condition, as consistent and regular seeding will depend on this. To replace the seed tube, remove the gauge wheel and disc opener on one side to remove the top pin holding the tube in place.

Electronic seed monitors (that monitor the flow of seed through the seed tube) are optional. See optional equipment.

Note: If the optional V shoe insert is used for small seed, it must be removed when planting larger seeds such as beans, as it will cause plugging due to normal crimping of the seed tube during installation.

METERING BOX ADJUSTMENT

The outside lever on the metering box cover is unique. It makes two adjustments at the same time. It is these two factors that influence the degree of singulation of the seed.

(1) It adjusts the height of the scraper in relationship to the holes in the disc, and (2) at the same time adjusts the air suction (from the turbofan) to the weight of the seed.

When the indicator (1) is positioned to the "+", it raises the scraper over the holes of the disc and increases the amount of suction (closing the size of the hole (2)). This may cause doubles if raised too high.

When the indicator (1) is positioned to the "-" it lowers the scraper over the holes and reduces the degree of suction (opening the size of the hole (2). This may cause skipping if it is too low.

The clear plastic control window in the cover allows you to monitor the results.

Below is a recommendation for setting the indicator.

Corn	+1 (0 to +2)
Cotton	+1
Beans	+4 to +5
Sunflowers	+1 (0 to +2)
Coated Sugarbeet	+2
Uncoated Sugarbeet	0 (-2 to +1)
Pickles/Melon	- 1 ½ (-1 to-2)
Soybeans/Peas	+4
Sorghum	+3
Kidney Beans	+5
Peanuts	$+4\frac{1}{2}(+4 \text{ to}+5)$
Rape Seed/Cabbage	+2

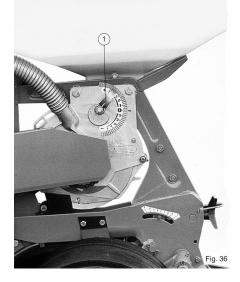

This applies to 500-rpm PTO speed, except for large seed (kidney beans, peanuts, etc.) for which a slightly higher speed (5-10%) is preferable. It is then recommended to run at 540 rpm PTO speed.

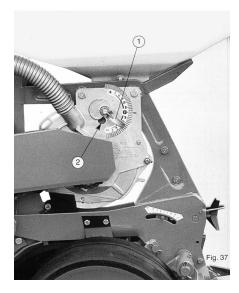

NOTE: The above settings are theoretical, so checking before and during planting is essential.

ROW UNIT

NG Plus 3

METERING BOX ADJUSTMENT

SEED DISC

Use the proper seed disc for different seeds. Check your type of seed, and use the **Seed Disc Recommendations** chart to determine the correct disc for your crop.

It is important to use seed discs that are clean and in good condition. Customized seed discs are not shown, but are available upon special request. It is not recommended to drill out your own seed discs. Any slight burrs or imperfections in drilling will alter your metering. The precision of your seed discs must be maintained to have proper metering.

The brass agitator screws onto the seed disc with 6 special screws.

If you remove your seed discs from the metering box, to clean or use different seed discs, it would be beneficial, when re-using the seed discs, to place them back into the same metering box. You can use a marker to identify the seed disc to the metering box.

SEED CHUTE

A seed chute (shown below) is supplied with each planter, and simplifies emptying of the hoppers.

© 2008 Monosem Inc. This is a dowloadable version of the manual. A partial download may not contain all pertinent information. Make sure to read Chapter 1, Safety. Due to ongoing upgrades specifications may change without notice, contact a Monosem Rep for current information. **ROW UNIT**_____

METERING BOX ASSEMBLY

METERING BOX - TROUBLE SHOOTING

Excessive Skipping

- Seed scraper is too low. (Incorrect setting on the

indicator.)

- Seed scraper is bent. (Not flat)
- Seed disc is bent or worn.
- Seed scraper is dirty with chemical product.
- Plastic wear surface of metering box is warped or used up.
- Holes of the seed disc are clogged (sugarbeets, rapeseed,
- cabbage.) To be double-checked from time to time.
- Excessive working speed.
- Defective vacuum hoses.
- Insufficient vacuum suction.
- PTO speed is too low.
- Foreign material mixed with seed.
- Seed blockage in the hopper.
- (Seed treatment product may be too moist.)
- Fan belt is too loose.

Excessive Doubling

- Seed scraper is too high. (Incorrect setting on the indicator.)

- Seed scraper is worn.
- Holes of the seed disc too large for seed.
- Excessive working speed.
- Seed level too high in the metering box.

Irregular Seeding (Skipping and Doubles)

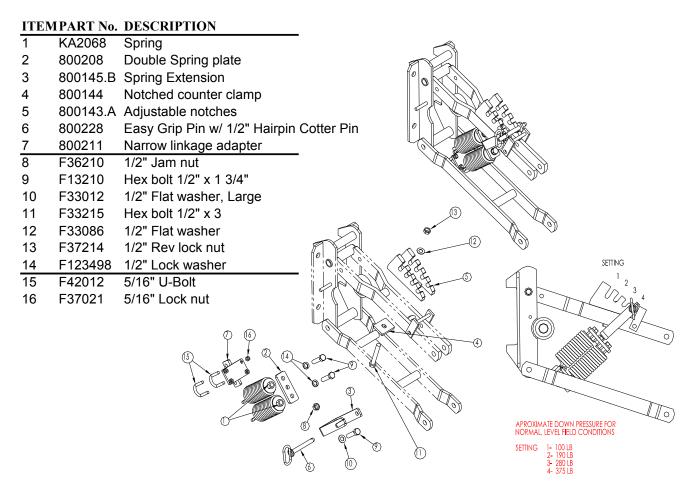

- Excessive working speed.
- Holes of the seed disc are too large. (Cut off seeds.)
- Fields are too steep
- Shutter is adjusted incorrectly

Irregular Spacing

- Excessive working speed.
- Soil is too wet and is sticking to tires.
- Incorrect tire pressure.
- Shutter is adjusted incorrectly.
- Ejector is damaged.

SEED DISC IDENTIFICATION

The size of the seed disc is engraved into the back of the seed disc. When ordering seed discs, the prefix DN indicates the disc only. The prefix DC indicates the complete disc with brass agitator (6212.a). The first 2 numbers of a 4 number series indicates the number of holes in the seed disc. The second two numbers indicates the size (diameter) of the holes.

NG Plus 3 Assembly

PART No.	DESCRIPTION	PART No.	DESCRIPTION
7068	Opening disc only	7127	Threaded rod
7069.B	Bracket for wheel stop/depth control rod	7130.A	Unit lock up bracket
7070	Swing bracket	7136	Spring
7076.A	Threaded for depth adjustment	7262.A	Spring support bracket
7077.2	Seed hopper, standard, 60 ltr	7300	Seed hopper, 52 ltr.
7077.3	Seed hopper, Twin row, 60 ltr	7316	Main frame NG+3
7077.3A	Seed hopper, TwinRow/reversed, 60 ltr	7337	Protection point, double disc openers
7077.4	Seed hopper, 3 bu.	7410	Upper parallel linkage arm
7077.UNR	Seed hopper, 50 ltr (1.4 bu, uses7088.n lid)	9174	Spring, chain tightener
7078	Wire stop for depth control rod	11579	Bearing, safety clutch (60062RS)
7079	Blank seed tube	11580	Snapring, 55mm
7083	Handwheel for depth control, uses 6x30 roll pin	650996	Clod remover, complete
7084.1A	Right outside scraper	900263	Opening disc complete w/bearing
7084.2A	Left outside scraper	F37188	Nylon locknut 5/8"
7085.DA	Insecticide drop tube, right	F40155	Lock nut 6mm
7085.GA	Insecticide drop tube, left	F40162	Nut, 8mm
7086	Pin for seed tube attachment	F40166	Nut, 10mm
7087.B	Pin, uses 2-5x40 cotter pins	F40170	Nut, 12mm
7088.N	Lid for 7077.UNR hopper	10170065	Cotter pin, M5 x 30
7089	Small chain guard	10170067	Cotter pin, M5 x 40
7090.A	Drive chain guard	10172090	Roll pin, M6 x 25
7091	Clip pin	10176004	Rivet, 6 x 22mm
7094	Spacer bushing	10200067	Red cap, depth indicator
7095	Pivot pin, takes 10x100 bolt	10502012	Bolt, M10 x 15
7096	Chain roller (cast iron)	10502016	Bolt, M10 x 25
7098	Lower parallel linkage arm	10511007	Bolt, M6 x 100
7099	Pivot pin, upper linkage, 75mm (16mm jam nut)	10511065	Bolt, M8 x 75
7100	Bushing, self lubricated	10512018	Bolt, M10 x 35
7101	Front point, clod remover	10512027	Bolt, M10 x 100
7102.A	Mounting bracket, clod remover	10512029	Bolt, M10 x 120
7103.A	Clod remover	10512058	Bolt, M12 x 110
7104	Lid w/o spring clip	10512059	Bolt, M12 x 120
7104.CO	Lid complete w/spring clip	10530094	Bolt, M6 x 20. oval head slotted
7104.2	Spring clip	10620095	Washer, 10.5 x 27 x 2mm
7105	Spacer	10621026	Washer, 13 x 18 x 2mm
7108	Bushing, self lubricated	10621046	Washer, 13x27x2mm
7114	Drive chain, 5R, 124 links w conn. Link	10622024	Washer, 16.5 x 26 x 1mm
7124.A	Unit stop	10622052	Washer, 17 x 50 x 1mm
